AS THE EDITORIAL PROVIDES INTERFACE WITH SUPPLIERS, THE EVALUATORS CAN CONDUCT THE TEST IN COMPLETE AUTONOMY AND THUS DELIVER AN EVALUATION FREE OF ANY COMMERCIAL PRESSURE.

SCORPION

# Magic Sonic

No misunderstanding: these in-ear devices are not supposed to compete with an active noise reduction system like the one found on many headphones that are both audiophile and nomadic. But these are rarely adapted to the specific frequencies to which we are exposed.

**Protect  
your ears !**

As the manufacturer of the Magic Sonic, a well-known player in the ultrasonic inserts market, explains, it is "just" a shrill noise reducer, specially designed to reduce the sound volume in the most harmful range in our activity professional, suction(s) and dynamic instrument holders. The box contains two complete sets with a view to equipping the Assistant who is exposed at least as much as the practitioner. This is clever because it also allows mutual control of their correct use during intensive scaling or "turbinng" sessions.

Presentation / ergonomics: ★★★★★

Ease of use: ★★★★★

Innovation: ★★★★★

Efficiency: ★★★★★

Buying indicator:

Because the major advantage of this approach is its simplicity: they are placed at the entrance of the ear canal and correctly preserve the possibilities of communication with the patient and the operating aid. The attenuation felt is partial but very real, the flexible cord allows them to be kept within reach when they are not in place, another point which facilitates good compliance and regular wearing, the best guarantee of preservation of our faculties hearing! If necessary, they are easily dismantled for impeccable cleaning.

There is no need to return to the issues of pathologies induced by this sound pressure, Pascal de March provided an excellent summary in a recent issue of «Information Dentaire».

Conclusion of the authors of the article analyzed in this section, the wearing of hearing protection should be systematic because it generally promotes a better quality of care with less fatigue on the operator's body, not to mention the short, medium and long term repercussions. ... What appears at first glance as a Low Tech solution actually constitutes a new option in a risk prevention policy, opting for simplicity to promote their daily use.
